	Syllabus					
Unit No.	Торіс	Prerequisite Topic	Successive Topic	Teaching Hours		
	Introduction to Python and Jupyter Notebooks1.1 Overview of languages : introduction and comparison of procedure, object oriented and machine level language, introduction, uses and features of python, difference of compiler and interpreter, use function of print			1		
01	 1.2 Jupyter Notebooks: creating, opening, saving and downloading notebooks 1.3 using interactive shell, editing, saving and running a script, basics of 			(5%)		
	python IDLE, IDEs, IDE					
02	Basic Elements of Python2.1 Basics and variables of data types for text, numeric and boolean (text, numeric, sequence, mapping, set, Boolean, range and len function), data type conversion and single line and multiline comments			2 (10%)		
	 2.2 Arithmetic, relational, logical, ternary, bitwise, assignment, identity and membership operators and their expressions, operator precedence 2.3 Reading input from users for text and numeric 					
03	Decision Making Statements			2		
	3.1 Control Statements: Simple if, if-else, if-elif-else(ladder if), Nested if			(10%)		
04	Looping Constructs 4.1 Loops: for loop, while loop, nesting of loops 4.2 Break, continue, pass statement			- 3 (15%)		
	Functions and Scoping					
	5.1 Declaring, defining and invoking different categories of user define functions.					
05	5.2 One liner and multi liner function specification5.3 Function arguments: keyword, default, positional and arbitrary or variable-length			(10%)		
	5.4 Local v/s Global variables, modules			_		
	Immutable Data Structure					
	6.1 Immutable data structures (operations and functions): strings, tuples, numbers					
06	6.2 Strings -immutability, declaring, creating, accessing character of string by index and slice operator slicing, mathematical operators, comparison, joining and formatting, removing spaces and changing cases of string. function of len, find, count,			2		
	replace, partition and split of string. check type of character presence in string using istitle(), isalnum(), islower(), isupper(), isnumeric(), isalpha(), isdigit(), isidentifier(), ispritable(), isspace()			(10%)		
	6.3 Tuples - immutability, creating, accessing elements by index and slice operator slicing and mathematical operator, function of len, count, index, sorted, min, max, tuple packing and unpacking					
	Mutable Data Structure					
07	7.1 List- mutability, creating, accessing elements by index and slice operator slicing, operators - mathematical, comparison, membership, functions - len, count, index, append, insert, extend, remove, pop, clear, sort, reverse, split, aliasing and cloning of list – slice and copy, nested list, nested list as matrix, list comprehensions					
	7.2 Set - mutability, creating and accessing element of set, mathematical operations – union, intersection, difference, symmetric difference, membership operators functions – len, add, update, copy, pop, remove, discard, clear, set			3 (15%)		
	comprehensions			1		
	7.3 Dictionaries- mutability, creating, accessing, updating, deleting elements of dictionary functions – dict, len, clear, copy, update, get, popitem, keys, values, items, setdefault, dictionary comprehensions, loop and nested dictionaries					

	Working with Files						
	8.1 Types of files						
	8.2 Create, open, with open, read (read(), readlines(), readline()),			2			
08	write((write(), writelines()), append (tell(), seek(offset)), close, rename or						
	delete text files. various properties of file object.8.3 OS module- getting and changing current working directory, creating,			(10%)			
	removing and renaming directories, list files and sub directories						
	8.4 System modules – sys.argv, sys.exit, sys.maxsize, sys.path, sys.version			-			
	Mathematical Functions in Python						
	9.1 Import math module			- 1 (5%)			
09	9.2 ceil, comb, floor, exp, fabs, factorial, log, pow, fmod, frexp						
	9.3 Trigonometric, logarithmic functions, maths constants	Trigonometric Function (017081191-Unit-2)					
	The Matplotlib Library						
	10.1 Installation and import of matplotlib and numpy						
	10.2 Function for graph: create label, title, legend, set font properties, grid,						
	plot, show, subplot, color, colormap						
10	10.3 Line graph: line style, marker, marker size, format string fmt, color reference, multiple line, two lines on same graph, twinx and twiny function			2			
	10.4 Scatter graph: marker style, color and size, alpha			(10%)			
	10.5 Bar graph: horizontal and vertical bar, width, height, color			7			
	10.6 Histogram and Box Plot						
	10.7 Pie chart: lables, array, color, startangle, explode, shadow						
	10.8 plotting maths functions

Course	Outcome
	Upon completion of the course students will be able to
CO1	Understand the basics of python programming.
CO2	Apply the fundamental python concepts such as data types, identifiers, keywords, constants, variable, comment, basic input output, operators, and its precedence.
CO3	Analyze the indentation syntax, branching and looping techniques, and various data structures such as strings, arrays, lists, tuples, dictionaries and sets.
CO4	Apply mathematical functions in python and generate different types of the plots using library.

1	 Hotel management system : Listed below are some of the important functions dashboard() – This function displays the menu or welcome screen to perform different hotel booking activities mentioned below. new_acc() – This function creates a new customer account. It asks for some personal and banking details of the customer such as name, date of birth, citizenship number, address and phone number. room_type() – This function allows the user to select the categories of the room ie normal or executive with the option of Ac room or non ac room. check_availability() – This functionality allows the user to check the number of room vacant prior booking. book_room() – This function allows the user to book the selected room. search_facilities() – With this function, if the user selects the executive room than user can search for the extra facilities provided like games, swimming, food service in rooms while booking. payment() – This function allows making payment of booked room based on number of days the room is occupied via online method option or at the checkout time. 	Unit 2,3,4,6
2	It is required to maintain and process the status of total 9 resources. The status value is to be stored in an integer array of dimension 3x3. The valid status of a resource can be one of the 3 followings: free : indicated by integer value 0 occupied : indicated by integer value 1 inaccessible : indicated by integer value 2 Declare a class called ResourcesStatus, having data member called statusRef, referring to a two dimensional array (3x3) of integers to be used to refer to the above mentioned status values. Define a member method called processStausCount that counts and displays total number of free resources, total number of occupied resources and total number of inaccessible resources. The exception to be raised and handled if total number of occupied resources as free. Accept initial status values from user and initialize the array. Raise and handle user defined exception if invalid status value given.	Unit 2,3,4,6,8
3	 Create an application that performs the following task associated with the files : Eliminating repeated lines from the files. Reverse the content of file and store in another file. Remove the lines starting from any prefix. Obtain the line number where the particular word is present. Obtaining number of words, characters, white spaces and lines present in that particular file. 	Unit 2,3,4,5,6
4	Implement calculator functionality.	All Units
5	Write a program to implement Quadratic equation.	All Units
